

Meeting Minutes - Mi, 18.07.2012, 14:00-14:30

Participants: Udo, Harald, Matthias, Alex (Protokoll)

1. SCU Tests

- Read/Write on InterfaceCard (etherbone) (not yet installed, Stefan Rauch is working on that)
- Test of all available Timing-Receiver-Methods (etherbone) (Will be done as soon as we have a WR-Switch connected to the SCU. Currently the Timing team needs the switch for timing-related-testing)
- Test of the Function-Generator-FPGA-Device (Not yet available for etherbone)
- ACU (not yet available)

2. Proposal "information-property"

- proposal was accepted by all
- property has to exist as global and as device-property
- CERN will be asked, if they as well would like to have this functionality

3. Proposal "GSI-alarm-property" and "GSI-alarm-field"

- proposal was accepted by all
- added more documentation to the proposal
- will be implemented for next release ... than we will see if functionality is sufficient.

4. Misc

- Gasper Jansa and Rainer Haseitl will re-view a Cosylab-FESA2.10 class for beam-diagnostics (BeamPositionMonitor?).
- TODO: Check if old CERN-Timing-library is available for 64bit ... if not, it seems we are forced to as well use the new one.
