

## Meeting Minutes - Mi, 24.10.2012, 10:00-11:30

**Participants:** Solveigh Matthies, Christoph Handel, Jutta Fitzek, Ludwig Hechler , Matthias Wiebel, Alexander Schwinn (Protokoll)

### 1. FESA-GSI Workshop November

- Discussion about topics, speakers, participants, etc.
- Preliminary outcome can be checked here: <https://www-acc.gsi.de/wiki/FESA/FESAWorkshopNov2012>

### 2. CERN-Timing-Library

- Can now be compiled at asl-cluster with local makefiles ( no Makefile-dependency to CERN-NFS structures )
- Is now 1 library instead of 4+ ( unneeded circular includes )
- As well CERN-Timing-deamon can be compiled + linked at GSI.
- All that run's ( tested on sddsc007 )
- Still open:
  - VME- Hardware-driver for Timing-Converter-Card
  - In-code pathes, to be checked if we want to fix them / where they should point to, if yes.

### 3. Next Release

- FESA-Trunk should be ready to release until end of this year
- Still some minor fixes necessary
- Agreed procedure will be to first add a release-branch + tag this branch, and than work on a RPM-Installer for this tag. ( Not in parallel because the RPM-Installer could as well contain tag-specific code-fixes )
