

Protocoll 3. Meeting Di, 23.11.10

Participants: Ludwig, Alex(Protokoll), Gasper, Stefan, Harald, Solveigh

- Ludwig presentet the current device types at GSI. In the next meeting Harald will continue on this, reagrding the Beam Diagnostic devices
 - 1) It seems like so far all devicetypes could also be implemented in Fesa
 - 2) Alex will take a look if an acquisition field can be used by two or more different properties in Fesa
 - 3) After going through all devices, we will sum up alist of basic properties, which will be implemented by every Fesa-device
- Stefan & Alex finished the the SCU test-class. Now a scenario needs to be set up, to perform the test. Estimated time between interrupt and RT-Action execution is around 40 microseconds.
- Short discussion about added points on the FE-Intergartion team – list
- The FE-Integration Team will now meet every 2 weeks on Wednesday – 14:00 o'clock
