

## Meeting Minutes - Mi, 10.04.2013, 14:00-14:30

**Participants:** Harald Bräuning, Ludwig Hechler, Udo Krause, Solveigh Matthies, Matthias Wiebel, Alexander Schwinn (Protokoll)

### 1. Plannings next FESA-release

- Following CERN's 1.0.0 release (May/June)
- 64Bit support will be added as soon as we have:
  - cmw self-compiled for 64-bit
  - Working fesa-arrays-types for 64-bit (see FESA-3555)
- Next release will only be provided for Redhat6
  - Small discussion about Redhat-version on the MCS-Sacley. Probably the MCS as well will be moved to Redhat6 when FESA is ready for it
  - Bootimage for frontends + NFS mounts still missing for Redhat6
- What we want to have for the next release:
  - cmw self-compiled
  - new GSI-Status-Property (TODO: Discussion detailedStatus)
  - Integration Testclasses from CERN in order to validate installation

### 2. ACU-Power-Supplies

Still waiting for firmware/specifications from the power-supply group.
