

Protocol 4. Meeting Di, 26.11.2010 10.00 – 11.00 Uhr

Participants: Udo, Jutta, Stefan, Ralf H., Harald, Alex, Solveigh (Protokoll)

Top 1

- Discussion of #6 Requirements Server Interface
- **Data throughput**, the maximum amount of data will be generated by beam diagnostics; this will be image frames of still images as well as live streams from single cameras that monitor a beam
- typical other data will not take as much
- the only real hardware constraint might be the VME bus system which is considered as not critical at the moment

Top 2

- Discussion of Event Subscriptions
- the CCT will discuss the use cases and summarize them in a document that will be discussed in the next meeting
- the term 'Event Subscriptions' will be renamed to 'Event Connections'
