

## 2. Create a Design project

### Creating new Design Project

To start the Design wizard go to File -> New;

Now from the wizards list we should expand list under "Silecs", choose "Design" and press next.

In the New Design Wizard user enter project name and change project version.

Both project name and project version have to follow specific pattern.

### New Design Project

 Invalid project name. Project name must follow pattern:  
[A-Z][A-Za-z0-9\_]\*

Enter project name

Enter project version

It is also forbidden to create a project that is already in the workspace.

### New Design Project

 Project with this name already exists in the workspace

Enter project name

Enter project version

Valid project name and version:

### New Design Project

Enter project name

Enter project version

Now the project should appear in the project explorer list and NewDesign.silecsdesign file should automatically open.

All the design projects have the same icon:
