

3. Create a Deploy Project

Creating new Deploy Project

To start the Deploy wizard go to File -> New;

Now from the wizards list we should expand list under "Silecs", choose "Deploy" and press next.

In the New Deploy Wizard user enter project name and change project version.

Just like for design the tool prevents from using wrong project name and version.

New Deploy Wizard (on cwe-513-vml213.cern.ch) x

New Deploy Project

Enter deploy-unit name

Enter deploy-unit version

< Back Next > Cancel Finish

After pressing the Finish button MyDeploy_1.0.0.silecsdeploy document will be opened.

Icon for deploy project is:

In the example document shown below you can see the document MyDeploy_1.0.0 describing 4 different controllers at the same time. The controllers are (called plc1, plc2, plc3, plc4) all Siemens Simatic S7-300 and they all deploy 1 instance of SilecsHeader 1.0.0 and 5 instances of SilecsValid_1.0.0.
