

Design & Deploy-unit documents

1. How to change owner of a document?

Answer: Only owner can update rights of his documents (adding/ removing users), but anybody can request to force changing owner of a document (Design or Deploy-unit) with prior check of SILECS support:

- delete the document from your workspace and reply 'yes' to remove contents on the SILECS server. SILECS expert will call you to check and confirm this operation is valid before removing the document from the SILECS database.
- then simply change the owner in the document and generate the related Deploy-unit.

2. How to create a new version of an existing SILECS document (Design or Deploy-unit)?

Answer: Simply import your existing document and save it as a new version.

Here is an example for a Design document:

- File --> Import: select 'Silecs' component then 'Import Silecs-1 Design file'
- NEXT
- Browse your SILECS workspace (or any other source folder) and Select your existing design document (inside .../src/design folder in case of SILECS workspace)
- NEXT
- Simply change the version number (keeping the design name)
- FINISH
