

Tool startup

1. I do not manage to start the SILECS 1.0.0 official version of the configuration tool!

Beta users may have problem to start the official release of SILECS 1.0.0 because their local JAVA cache still refers to the BETA 1.0.0 version.

Answer: Simply remove the following cache folder:

- a. Windows path: `C:\Users\<user-login>\deployment\cache\jws\Silecs-Configuration_1.0.0`
- b. LINUX path: `/local/java.users/<user-login>/.java/deployment/cache/jws/Silecs-Configuration_1.0.0`

2. How to change my default workspace path?

Answer: Simply define a new path in the [workspace launcher](#) at the tool startup.

If you have already checked the box: 'Use this as default and do not ask again', you can request switching directly from the main menu:

File > Switch Workspace

Restart the tool if it does not restart automatically and define your new path.
