

Generate resources

1. **My deploy document is valid but when i generate i get the following error:**

Generating Client Resources for: cfp-774-csimatic-s7-02
SilecsHeader_1.0.0 could not be found in the workspace
Failed to generate client resources from cfp-774-csimatic-s7-02

Answer: Every Silecs Deploy requires an Instance of the SilecsHeader_1.0.0 design to be deployed on the user controller. This is used to establish the communication and for diagnostic purposes.
Since generation is done locally a copy of this design must be present within the user's workspace!
[Here](#) how to check out a local copy.
