

Release

1. I don't see updates (new features, fixes, etc.) provided by the last SILECS release.

Answer: You will be notified by silecs-support when a new release has been delivered. If you cannot see the changes after restarting the tool, you have 2 solutions:

- remove the <.metadata> folder from your current workspace directory and restart the tool.
- restart the tool with a different workspace. In this case, you have to import projects to the new workspace:
File->Import>General-> Existing Projects into Workspace

2. Migrate SILECS beta-release documents to SILECS 1.0.0

Answer: For SILECS BETA users, you will find how to retrofit the former SILECS deploy document: [HERE](#)
