

7. Sharing projects via SVN

Centralized SVN Repository

Silecs projects which are deployed must be stored on SVN.

Silecs 1.0.0 has a centralized common repository where design and deploy project must be uploaded.

Design repository: <https://svn.cern.ch/repos/SILECS-DATA/trunk/1.m.p/design/>

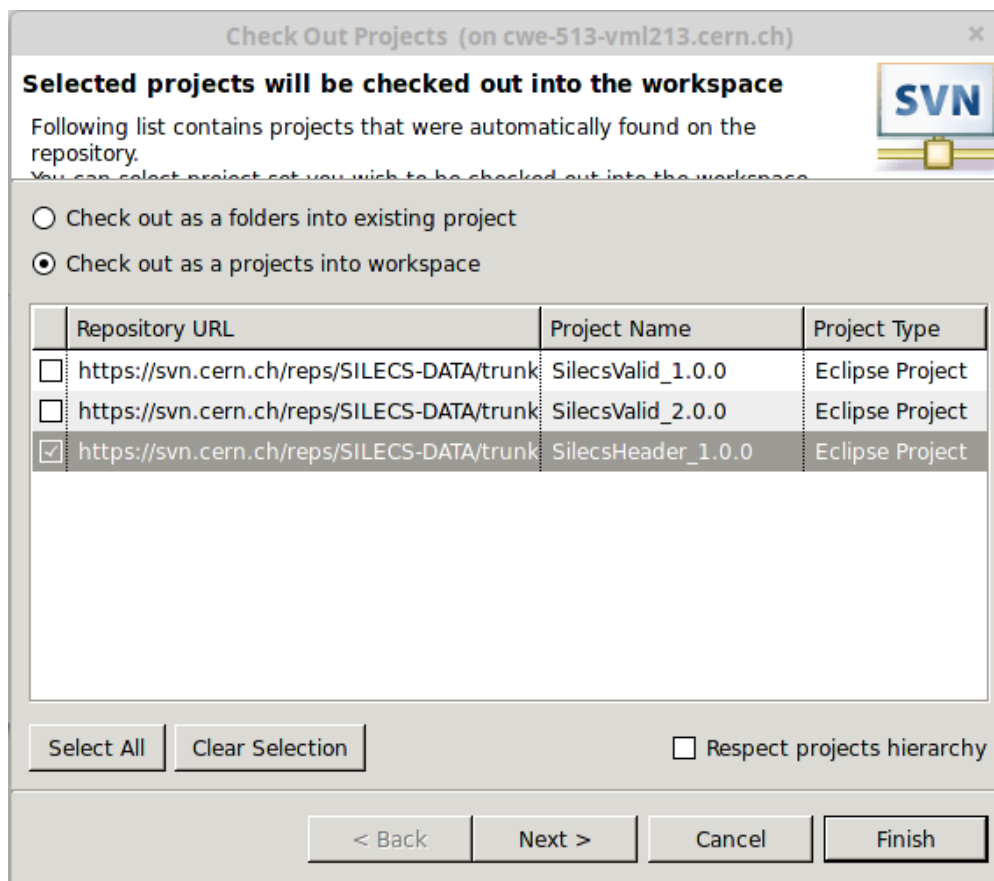

Deploy repository: <https://svn.cern.ch/repos/SILECS-DATA/trunk/1.m.p/deploy/>

Check out a project from the repository

Let's now assume we would like to check out the design SilecsHeader_1.0.0. (Checking out a deploy works in the exact same way but you should use the other repository)

In order to check out an existing project follow the following steps:

- File -> New -> SVN -> Project from SVN and press Next;
- Select the design repository then Next and Finish;
- Choose the option "Find projects in the children of the selected resource" and press Finish;
- Select SilecsHeader_1.0.0 or the project you would like to check out and press Finish.

Share a project on the repository

In order to share your project follow this steps:

- From the project Explorer panel on the left side of the tool select the root of the project you would like to share;
- Right click on the project -> team -> Share project;

- Select the design or deploy repository depending on the nature of your project and press Next;
- If not selected by default choose "Simple Mode" and press Finish;
- Enter a meaningful comment regarding your delivery and press ok.

Sharing multiple projects at the same time is possible! select all of them and use Share projects from the menu bar. Be careful that they all must be of the same nature since they will be shared on the same repository!
